ACTORS' EQUITY ASSOCIATION

DIVERSITY REPORT

2016-2019 IN REVIEW

EXECUTIVE SUMMARY

In 2017, Actors' Equity Association published the first Diversity and Inclusion Report, tracking the demographics of how its 51,000 members are hired for acting and stage management work, and how much they are paid. This is a follow up to that report, covering hiring statistics from 2016 through 2019.

Expanded Analysis

The last study focused on gender and race as points of identification, and briefly mentioned disability. It measured both rate of representation and earnings, including what demographic had the power to negotiate additional compensation. The current study has added "non-binary/third gender" or "prefer to self-describe" as gender options and includes data about orientation and transgender status. It has more data about hiring of disabled members and includes information on veteran status and age as well.

Study Structure

This study is in two parts. The data in the first section is national. It measures the distribution of race, gender and orientation, age, disability and veteran status across all Equity contracts. This data also includes the race and gender distribution

among Equity's two most prominent contracts: the Production Contract (used on Broadway and some national tours) and the LORT Contract (The League of Resident Theatres Contract, used at major regional theaters nationally). In the second section, the data is divided by Equity's three geographical regions and considers both race and gender in each region.

Incremental Industry Shifts

In short, there has been improvement since the 2017 study - meaning that there has been more equitable distribution of contracts and earnings - but most improvements have been extremely gradual and inconsistent across geographical areas.

In terms of race, contracts going to people of color increased from 15.3% in the prior study to 23.3% in the current study. Contracts to Black members 45.7% of that increase. That change however, does not necessarily reflect improvement across the industry. For example, among Production Contracts, much of the increased representation of people of color can be attributed to multiple productions of *Hamilton* alone.

Importantly, what little change has occurred since 2015 falls short of reflecting demographics of the communities which the shows serve. For example, as of the 2010 U.S. Census, 39.6% Americans are of color. But from 2016-2019, 21.5% of Equity contracts nationally went to members of color. Furthermore, sometimes improvements only exist within certain job categories. For example, chorus roles (which overwhelmingly appear in musicals) tend to be more racially diverse than principal roles in both plays and musicals. Hiring of stage managers seems the most resistant to change, with a much smaller improvement for racial diversity nationally compared to actors. This is a reminder that our industry's inclusion problems go much deeper than casting alone.

In terms of gender, more contracts still go to men. Nationally, contracts that went to women increased from 43.5% of all contracts to 44.9% in the current study. A pay gap remains between genders because men are able to receive more overscale (payments above minimum requirements). Not only do women earn less than men, but transgender, non-binary or gender-nonconforming members usually earn less than their cisgender peers in the same job categories on any given contract type.

Barely 1% of contracts issued from 2016-2019 were to members who report living with a disability. This number is surely higher in reality. Nationally, roughly one in four Americans are living with a disability. Furthermore, people with disabilities tend to earn less than their non-disabled counterparts.

Aging in the industry tends to exacerbate many of these issues. While Equity does not have data on what percentage of the union's older members are actively seeking work, there has been a decrease in the percentage of contracts going to members over 65 since 2013-2015. In addition, contracts issued to members of color skewed younger compared to white members, who were most likely to be issued contracts beyond age 65. From 2016-2019, not a single contract went to a member who self-identified to the union as both Indigenous Hawaiian/Pacific Islander/North American or Middle Eastern/North African and over the age of 65. Nationally, 73.8% of all contracts for members 65 years old and older went to white members."

METHODOLOGY

- This report analyzes demographic information for members of Actors' Equity Association working on Equity contracts nationwide from January 1, 2016 to December 31, 2019. Older data included for purposes of comparison are from January 1, 2013 through December 31, 2015.
- Demographic information (age, gender, disability, race, etc.,) is gathered from Equity members confidentially self-identifying to the union, and earnings information comes from contracts filed with the union.
- Intended to represent initial job opportunity and earning potential, this data is collected solely from contracts involving a production's opening performance and does not consider replacement contracts or salary increases over the course of a run. Therefore, as with the prior study, only productions that opened during the study timeframe area included in the study.
- A "contract" does not refer to an individual member, but a job; if the report says, for example, that 20 contracts went to women, that could mean one woman with 20 contracts, 20 women with one contract each, or anything in-between. This study examines 93,957 contracts from 2016-2019.
- This study examines five different types of jobs: Principal actor in a play, principal actor in a musical, chorus actor, stage manager and assistant stage manager.
- There are two categories that represent a lack of information: "Prefer not to say" is an option for members who wish to keep demographic information private, whereas "unknown" means the question went unanswered.
- "People of color" (POC) refers to individuals who actively opt to self-identify as non-white or European American.
- This study excludes a small subset of 93 contracts in which members earn over \$10,000 overscale weekly.
- Averages are calculated as arithmetic means.

How to Use This Report

Statistical analysis like this takes a subset of the population— in this case, Equity members— and compares them to the general population— in this case, the U.S. If that subset seems to differ strongly from the general population, it means that an external force is creating that change. These differences are examined through characteristics protected by various US nondiscrimination laws, such as gender and race.

This report also examines compensation, specifically by Equity employers on Equity contracts. When you read this report, as you would assume a population's subset should reflect the overall population, assume equal pay for equal work. Any trends in data showing otherwise similarly indicate an external force creating differences.

What those external forces might be, however, is beyond the scope of this report. The opportunity and income inequality reflected in this report are the result of a complicated web of artistic discretion and systemic, institutional and internalized marginalization. No one trend or data tells the whole story, but are many, many narratives in aggregate, from a bird's eye view.

Z

The data and format of this study, however, cannot definitively prove which external forces have caused income and opportunity inequality.

Throughout the report, pie graphs show distribution of representation along a single protected characteristic in terms of percentages. For some protected characteristics, the numbers are such a small fraction of the whole that a graph is not useful to convey a rate of representation. In those cases, a chart is included which conveys representation numerically. Attendant with each pie graph is a horizontal bar graph. Each bar graph offers a side-by-side comparison of the average rate of pay for each of the identity groups represented in the pie.

Each bar has a label with the exact dollar value. Through each bar graph, there is a broken red line denoting the average pay overall, so the readers can see which groups are above and below the overall average pay rate. The red line is also labeled with an exact dollar value of the average earnings overall.

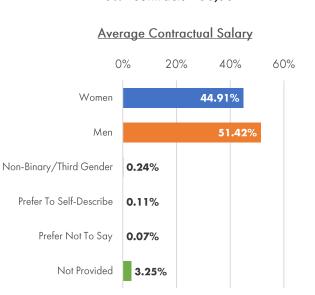

Finally, the appendix has further information, including comparisons to census data and contract terms (such as minimum salary rate tiers). Every piece of data collected and visualized for the 2020 edition of the diversity study is charted numerically in the appendix.

DIVERSITY AND INCLUSION 2020: PUSHING FORWARD

In January 2020, the last issue of *Equity News* before the pandemic, I wrote about what I called "the necessity of difficult conversations."

I concluded that column by noting that as a nation, we were more frequently having difficult conversations about marginalized groups and harassment in the workplace.

So much has happened since March, and we are now in a time of reckoning for our lack of acknowledging the marginalizing of our fellow citizens in our society, as well as the marginalization or our BIPOC, disabled, transgender and gender non-binary members in our workplace.

This study is a follow up to the Diversity Study we published in 2017. We waited too long to collect this data the first time, and we waited too long to follow up. From now on, we intend to release a refreshed version of this report annually, and to make it publicly available. We understand that there is a human being attached to every piece of data shown here.

Equity cannot control who an individual employer chooses to hire, but we can be loud and insistent in calling out a structure built on biases both implicit and overt. It is our duty to be part of the solution, to work to tear down barriers and rebuild a structure that is truly inclusive.

This report shows that there have been some gains: For example, a higher percentage of total contracts nationally have gone to women as well as people of color. However, these gains have been woefully insufficient, and not uniformly true across the country.

We rely on you to make this information as accurate as possible. For example, as we have continued to track contracts that have been worked by members with disabilities, the increases we have seen can be attributed not only to a change in hiring practices, but also to more members telling us that they self-identify as living with a disability. You help us to represent you when you self when self-ID in the member portal. This information is not used to track individuals, and your personal information is not shared with employers. It is used so that we can hold ourselves accountable to our diverse membership and to hold the industry accountable as well.

This report is one tool that we have to use to better represent all of you. And, it is information that you need to have to hold us accountable. We will be releasing further analysis of the data over the next few months.

In solidarity,

Many Mc611

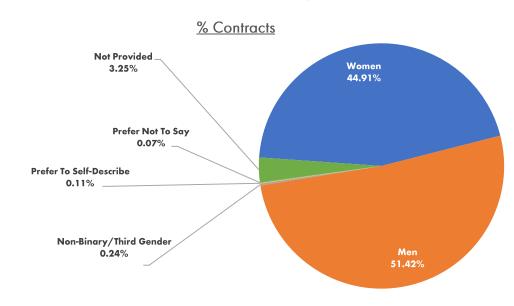

Mary McColl Executive Director Actors' Equity Association

Equity has increased its outreach to members as we have expanded our identity surveys of our membership. Of our over 51,000 members, 86.5% opted to not respond to questions about trans/cis identity. In an effort to accurately reflect known aspects of self-identity in an under-represented community, the graphic reporting on this topic reflects the employment offered to the 13.5% of members who chose to self-identify. The complete records used to report this information, including the employment of members who chose not to respond, can be found in the appendix.
